Professional Summary

Backend and AI Software Engineer with experience at Google and Zazmic, specializing in scalable backend systems, API design, and AI-driven automation. Proficient in Kotlin, Java, Python, and cloud platforms (GCP, Azure). Track record of shipping production-ready services and building LLM-powered tools across distributed, cross-functional teams.

Key Highlights

- Built backend systems at Google powering Google Assistant in Android Auto across 1+ year tenure.
- Shipping AI agents and MCP clients at Zazmic for automation, cybersecurity, and data analysis.
- Full-stack backend expertise: Kotlin, Java, Python, GCP, Azure, PostgreSQL, Docker, CI/CD.

Professional Experience

AI Engineer, Zazmic – Remote Oct 2025 – Present

- Designing and deploying AI agents and MCP clients for automation, data analysis, and cybersecurity use cases across a globally distributed team.
- Researching and integrating large language models (LLMs) into production workflows, including prompt engineering and evaluation pipelines.
- Shipping end-to-end AI-driven features across multiple client domains with rapid iteration cycles.

Software Engineer, Google – Kirkland, WA July 2022 – Oct 2023

- Built and optimized a testing tool used by vehicle manufacturers to validate Google Assistant functionality in Android Auto, delivering performance improvements that reduced response times by ~30%.
- Drove code quality across the team through thorough code reviews and documentation updates, ensuring materials stayed aligned with ongoing product changes.
- Operated within an Agile Scrum workflow, owning task tracking and sprint coordination to maintain team velocity and delivery visibility.

Projects

Software Engineering Apprenticeship (Mentorship Program) June 2024 – Present

- Built secure, scalable web applications with JWT-based authentication under mentorship from engineers at Amazon, Meta, Airbnb, Microsoft, and Google.
- Deepened proficiency in React, TypeScript, C#, and data structures & algorithms through structured project work and code review.

Stats Retrieval Backend — flashkick.gg Oct. 2024 - Present

- Engineered a backend pipeline to extract and process tournament data from Start.gg, enabling reliable player/set association for Street Fighter 6 events, with ongoing expansion to support additional fighting game titles.
- Designed a modular backend pipeline (Node.js, PostgreSQL) for real-time data processing and integration.
- **Tools:** JavaScript, Node.js, GraphQL, PostgreSQL

[Strike-Bot](#) Feb 2022 - May 2022

- Built an event-driven bot (Java, JDA) simulating real-time moderation with networking and Agile workflows.
- **Tools:** Java, JDA (Java Discord API), Git, Agile, Kanban

[Corpses Are Forever](#) — [Play Game Online](#) Dec 2020 - Mar 2021

- Designed and developed a 2D puzzle game in a 3-person team, where players use fallen characters strategically to solve challenges.
- **Tools:** HTML, CSS, JavaScript, Agile, Kanban

Education

University of Washington, BS in Computer Science (Minor in Math) 2018 – 2021

Relevant Coursework: Operating Systems, Databases, Algorithms, Network Security

Core Technical Skills

Languages	Frameworks/Tools	Cloud/DB	Web
Kotlin, Java, Python, C#, C++	Linux, Git, Docker, CI/CD, Google ADK, LangChain, MCP, OpenAI API, Anthropic API	GCP, Azure, AWS, PostgreSQL, Redis	JavaScript, TypeScript, React, REST, Node.js
